Fourier-Mukai transform - Wikipedia In algebraic geometry, a Fourier-Mukai transform  $\hat{K}$  is a functor between derived categories of coherent sheaves  $D(X) \rightarrow D(Y)$  for schemes  $X$  and  $Y$ , which is, in a sense, an integral transform along a kernel object  $K \in D(X \times Y)$ . On the level of the DG enhancements, it is true for all smooth proper  $K$ -schemes that, in the homotopy category of DG categories, every functor corresponds bijectively to an isomorphism class of objects on  $D(X \times Y) \cong D(X) \otimes D(Y)$ .
