Fractures (Broken Bones) - OrthoInfo - AAOS Common types of fractures include: Stable fracture. The broken ends of the bone line up and are barely out of place. Open, compound fracture. The skin may be pierced by the bone or by a blow that breaks the skin at the time of the fracture. The bone may or may not be visible in the wound.

Classifications in Brief: The Neer Classification for ... The four-segment classification system defines proximal humerus fractures by the number of displaced segments or parts, with additional categories for articular fractures and dislocations (Fig. 1). The potential segments involved are the greater tuberosity, lesser tuberosity, articular surface, and. Fracture Classification in ICD-10-CM Fracture Classification in ICD-10-CM Fracture coding in ICD-10-CM requires documentation of site, laterality, type of fracture, whether it is displaced or nondisplaced, and the stage of healing (or encounter), which includes open fracture classification. CHAPTER 11 Identifying a fracture by location does not indicate whether the fracture is open or closed, nor does it indicate the type of fracture: transverse, oblique, spiral, or the like. The systems of classifying by type and classifying by location are compatible and should be used together.
